

RE: Orthoplex White Label SAME 200mg and 400mg transportation and stability

Orthoplex White Label SAME has been formulated for clinical practitioners only and been subjected to exceptional quality control measures to ensure a guaranteed 200mg and 400mg equivalent of (S)-S-Adenosylmethionine per tablet for the shelf life of the products.

To preserve this potency and efficacy until the end of product expiry it is recommended Orthoplex SAME be kept refrigerated between the temperatures of 2 °C - 8 °C.

However, Orthoplex SAME has been specifically formulated to be tolerant to short term temperature increases to allow for transit outside of refrigeration. A significant quantity of increased overage has been included into the formulation and validated by stability indicating analytical testing to ensure that the dosages of 200mg and 400mg equivalent of (S)-S-Adenosylmethionine per tablet is maintained for up to 7 days transit time without refrigeration.

So, whilst transporting with icepacks is desirable, Orthoplex SAME sent in unrefrigerated packs, displays no discrepancies regarding efficacy or potency of the products.
