

Technical Report

Products:	Eagle FloraBalance 45g Powder (Aust L 369999)
Product Codes:	EPFBP45
Issue:	Stability of Probiotic Products during transportation

Extensive stability studies have been performed by Integria Healthcare in order to determine the impact, if any, that exposure to ambient (non-refrigerated) temperature has on our Probiotic range. Studies have covered the following criteria:

1. Appearance
2. Average Weight
3. Uniformity of Weight
4. Disintegration
5. Active Content including Enumeration (if applicable)
6. Microbial tests

Results indicate that the products test well within their release specifications, and exposure to ambient (non-refrigerated) temperature for a period of at least 1 month would not impact the shelf life of the product. Probiotic stability testing is on-going and will be continued to be monitored.
