Therapure Liposomal Glutathione should be stored in a refrigerator (2-8 °C) to ensure optimum stability and flavour profile for the product's intended life (24 months).

NOTE: However, short-term storage and transit times at typical room temperatures (below 25 °C) are acceptable for short periods (2-3 days) if the bottle remains unopened and high heat exposures are avoided.

Once opened, refrigerated storage is required, and consumption should be completed within 30-60 days.

Avoid freezing.
